### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Platz (Reg. No. 60,013) on July 11, 2007.

The application has been amended as follows:

1. (Currently amended) A method for initiating a bifurcated process to be debugged by a debugger, where said bifurcated process is scheduled using a shadow process running in a first execution

environment and where said bifurcated process is executed using a trusted agent process running in a second execution environment, said method comprising:

initiating said shadow process in debug mode in said first execution environment, wherein the shadow process comprises a shadow process thread;

initializing said trusted agent process in said second execution environment, wherein the trusted agent process comprises a trusted agent thread corresponding to the shadow process thread;

attaching said debugger to said shadow process;

once said debugger is attached, configuring said shadow process to schedule execution of said bifurcated process by said trusted agent.

21. (Currently Amended) A system comprising:

a first execution environment that comprises a scheduler, said first execution environment being adapted to schedule and dispatch a plurality of threads for execution on a processor, said first execution environment being further adapted to initiate a shadow process in debug mode in said first execution environment, to attach a debugger to said shadow process, and to, upon receipt of an indication that execution should begin, to schedule at least one thread of a trusted agent process on a second execution environment;

a second execution environment that is adapted to dispatch a plurality of second threads for execution on said processor, said second execution environment being

further adapted to initialize said trusted agent process corresponding to said shadow process in said second execution environment, and to, upon completion of said initialization, send an indication that execution should begin to said first execution environment, wherein the trusted agent process includes a trusted agent thread that corresponds to a shadow process thread.

43. (Currently amended) A method for debugging a bifurcated process comprising:

scheduling a bifurcated process using a shadow process including at least one shadow thread running in a first execution environment and where said bifurcated process is executed using a trusted agent process running in a second execution environment, wherein said trust agent includes trusted agent threads ~~threads~~, each of said trust agent threads corresponding to one of said shadow process threads ~~threads~~;

receiving a request message from a debugger regarding a resource;  
verifying an identity of said requested resource from said request message; performing the request in said request message; and  
responding to said request message with the result of said request.

### **Reasons for allowance**

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach the limitation

of initiating said shadow process in debug mode in said first execution environment, wherein the shadow process corn rises a shadow process thread; initializing said trusted agent process in said second execution environment, wherein the trusted agent process comprises a trusted agent thread corresponding to the shadow process thread; attaching said debugger to said shadow process; once said debugger is attached, configuring said shadow process to schedule execution of said bifurcated process by said trusted agent as recited in independent claims 1, 21, 36, and 43.

The closest cited prior arts, "Process Hijacking", by Zandy et al. discloses a bifurcated process showing debugging function. However, Zandy et al. does not specifically disclose a debugger attached to a shadow process in a first execution environment to debug a work process with corresponding threads in a second execution environment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
